

## Single Source Shortest Path(Bellman-Ford Algorithm)

we make the following observations:

1. If the shortest path from  $v$  to  $u$  with at most  $k$ ,  $k > 1$ , edges has no more than  $k - 1$  edges, then  $\text{dist}^k[u] = \text{dist}^{k-1}[u]$ .
2. If the shortest path from  $v$  to  $u$  with at most  $k$ ,  $k > 1$ , edges has exactly  $k$  edges, then it is made up of a shortest path from  $v$  to some vertex  $j$  followed by the edge  $\{j, u\}$ . The path from  $v$  to  $j$  has  $k - 1$  edges, and its length is  $\text{dist}^{k-1}[j]$ . All vertices  $i$  such that the edge  $(i, u)$  is in the graph are candidates for  $j$ . Since we are interested in a shortest path, the  $i$  that minimizes  $\text{dist}^{k-1}[i] + \text{cost}[i, u]$  is the correct value for  $j$ .

These observations result in the following recurrence for  $\text{dist}$ :

$$\text{dist}^k[u] = \min \{ \text{dist}^{k-1}[u], \min_i \{ \text{dist}^{k-1}[i] + \text{cost}[i, u] \} \}$$

This recurrence can be used to compute  $\text{dist}^k$  from  $\text{dist}^{k-1}$  for,  $k = 2, 3, \dots, n - 1$ .

### Example

The following figure gives a seven-vertex graph, together with the arrays  $\text{dist}^k$ ,  $k = 1, \dots, 6$ ... These arrays were computed using the above equation.

For instance,  $\text{dist}^k[1] = 0$  for all  $k$  since 1 is the source node. Also,  $\text{dist}^1[2] = 6$ ,  $\text{dist}^1[3] = 5$ , and  $\text{dist}^1[4] = 5$ , since there are edges from 1 to these nodes. The distance  $\text{dist}^1[i]$  is  $\infty$  for the nodes 5, 6, and 7 since there are no edges to these from 1.

Adjacency matrix or **cost matrix** of the above graph is following

	1	2	3	4	5	6	7
1	0	6	5	5	$\infty$	$\infty$	$\infty$
2	$\infty$	0	$\infty$	$\infty$	-1	$\infty$	$\infty$
3	$\infty$	-2	0	$\infty$	1	$\infty$	$\infty$
4	$\infty$	$\infty$	-2	0	$\infty$	-1	$\infty$
5	$\infty$	$\infty$	$\infty$	$\infty$	0	$\infty$	3
6	$\infty$	$\infty$	$\infty$	$\infty$	$\infty$	0	3
7	$\infty$	$\infty$	$\infty$	$\infty$	$\infty$	$\infty$	0

$$\begin{aligned}
 \text{dist}^2[2] &= \min\{\text{dist}^1[2], \min_i\{\text{dist}^1[i] + \text{cost}[i, 2]\}\} \\
 &= \min\{6, \min\{0+6, 5-2, 5+\infty, \infty+\infty, \infty+\infty, \infty+\infty\}\} \\
 &= \min\{6, 3\} \\
 &= 3
 \end{aligned}$$

Here the terms  $0+6, 5-2, 5+\infty, \infty+\infty, \infty+\infty, \infty+\infty$  correspond to a choice of  $i = 1, 3, 4, 5, 6, \text{ and } 7$  respectively.

$$\begin{aligned}
 \text{dist}^2[3] &= \min\{\text{dist}^1[3], \min_i\{\text{dist}^1[i] + \text{cost}[i, 3]\}\} \\
 &= \min\{5, \min\{0+5, 6+\infty, 5-2, \infty+\infty, \infty+\infty, \infty+\infty\}\} \\
 &= \min\{5, 3\} \\
 &= 3
 \end{aligned}$$

here  $i = 1, 2, 4, 5, 6, 7$  respectively. Similarly you solve

$\text{dist}^2[4], \dots, \text{dist}^2[7], \text{dist}^3[2], \dots, \text{dist}^3[7], \text{dist}^4[2], \dots, \text{dist}^4[7], \text{dist}^5[2], \dots, \text{dist}^5[7], \text{dist}^6[2], \dots, \text{dist}^6[7]$ .

k	Dist <sup>k</sup> [1....7]						
	1	2	3	4	5	6	7
1	0	6	5	5	$\infty$	$\infty$	$\infty$
2	0	3	3	5	5	4	$\infty$
3	0	1	3	5	2	4	7
4	0	1	3	5	0	4	5
5	0	1	3	5	0	4	3
6	0	1	3	5	0	4	3

## Algorithm

Algorithm BellmanFord( $v$ , cost, dist,  $n$ )

// Single-source/all-destination shortest paths with negative edge costs

```
{
    for i = 1 to n do                // Initialize dist.
        dist[i] = cost[v, i];
    for k = 2 to n - 1 do
        for each u such that  $u \neq v$  and u has at least one incoming edge do
            for each(i, u) in the graph do
                if  $i \neq u$  do
                {
                    if  $\text{dist}[u] > \text{dist}[i] + \text{cost}[i, u]$  then
                         $\text{dist}[u] = \text{dist}[i] + \text{cost}[i, u]$ ;
                }
            }
    }
```

## Time Complexity

Time complexity of Bellman-Ford algorithm is  $\Theta(|V||E|)$  where  $|V|$  is number of vertices and  $|E|$  is number of edges.

If the graph is complete, the value of

$$|E| = |V|(|V|-1)/2 \approx \Theta(|V|^2).$$

So overall time complexity becomes  $\Theta(|V|^3)$ .
